## LIST OF SYMBOLS

—	Nil or zero.
--	Number is too small to be expressed.
·	Data are not available for any reference period. This symbol is used when the figure has never been published for any reference period. The symbol implies that the underlying time series does not exist, but theoretically could exist.
**	Data are not available for a specific reference period. This symbol is used when the time series exists but the figure is not published for a specific reference period.
***	Not applicable. This symbol is used when an entry for the table cell is not logically possible. For example, there could not be any data for "legal drivers under 15 years of age" or "women with prostate cancer." In such cases, no time series will exist.
×	Used to rank a region relative to a province or Canada. In tables showing percentages, × denotes a lower percentage than the province or nation. In tables showing rates of occurrence, × denotes a less favourable rate.
✓	Used to rank a region relative to a province or Canada. In tables showing percentages, ✓ denotes a higher percentage than the province or nation. In tables showing rates of occurrence, ✓ denotes a more favourable rate.
-	In tables comparing a region relative to a province or Canada, “-” denotes that there is no data available for comparison
<sup>E</sup>	Data with a coefficient of variation (CV) from 16.6% to 33.3% are identified by <sup>E</sup> and should be interpreted with caution.
<b>F</b>	Data with a coefficient of variation (CV) greater than 33.3% were suppressed due to extreme sampling variability. When a figure is "too unreliable to be published," the data point is suppressed and the symbol F appears in the data cell.
<b>s</b>	Used in tables ranking regions relative to a province or Canada. In tables showing percentages, s denotes that the percentage is equal to province or nation. In tables showing rates of occurrence, s denotes an equal rate.
<b>x</b>	Figures have been suppressed to meet the confidentiality provisions of the <i>Statistics Act</i> .
